

ENVIRONMENTAL POLICY OF THE MUNICIPALITY OF SANT LLORENÇ DES CARDASSAR

The municipality of Sant Llorenç des Cardassar has decided to implement an Environmental Management System at the beaches of the town, since it is aware of their richness and the tourist pressure suffered by them.

The implementation of an environmental management system aims to improve the environmental behaviour and prevent the deterioration of the coastal zone.

For this reason an Environmental Policy has been established based on the following principles:

- ❖ Identify environmental aspects and put the necessary intervention, control and correction measures, to achieve the continuous improvement of the Environmental Management System.
- ❖ Comply with the current environmental Regulations, in accordance with the requirements of the reference standards UNE EN ISO 14001: 2004, and in the future, the European regulation (EMAS III) for the tourist quality of the beaches.
- ❖ Increase recovery, rehabilitation and conservation interventions of our coast, with continuous improvements and innovating services and facilities of the beaches.
- ❖ Promote environmental information to all the people and companies included in the management and exploitation of the beaches, without forgetting the users.
- ❖ Evaluate in advance the potential impact on the environment of all the new activities and services developed, by adopting preventive measures to minimize or eliminate their impact.
- ❖ Likewise, involve in the Management System to all the companies which provide service on the beaches, with the aim of motivating them to implement their own system and ensure proper management of waste.
- ❖ Implement sustainable procurement criteria, whenever it is feasible technically and economically.
- ❖ Introduce good practices focused on the preventive environmental management.

Sant Llorenç des Cardassar, 11th July 2014

Mateu Puigròs Sureda
Mayor of Sant Llorenç des Cardassar
